Where the lift came from

Decomposing +117 bookings vs baseline, by channel.

Channel contribution table

Spike week vs baseline, sorted by contribution to the lift.

CHANNEL	SPIKE	BASELINE	Δ	Δ %	% OF LIFT
Facebook	371	289	+82	+28.3%	70%
Google Search	145	122	+23	+18.6%	19%
Organic	89	83	+7	+7.9%	6%
WhatsApp	13	9	+4	+48.6%	4%
Organic-WA	76	74	+2	+3.1%	2%
JustDial	3	1	+2	+200.0%	2%
Practo	14	16	-2	-13.8%	-2%

Was it sustained? Repeatable vs one-off

Compares spike-week channel mix to the 2 weeks AFTER. If a channel collapsed back to baseline → it was a one-time push.

CHANNEL	BASELINE	SPIKE	AVG POST-SPIKE	% OF LIFT HELD	VERDICT
Facebook	289	371	288	-2%	✗ One-off (lift evaporated)
Google Search	122	145	138	67%	~ Partial (30-70% held)
Organic	83	89	97	223%	✓ Sustained (>70% of lift held)
WhatsApp	9	13	14	112%	✓ Sustained (>70% of lift held)
Organic-WA	74	76	84	433%	✓ Sustained (>70% of lift held)
JustDial	1	3	2	50%	~ Partial (30-70% held)
Practo	16	14	16	33%	~ Partial (30-70% held)

Traffic vs conversion — why did each channel move?

Lead volume change x lead-to-booking conversion. Splits each channel's lift into "more eyeballs" vs "better closing".

CHANNEL	LEADS (SPIKE)	LEADS (BASE)	CVR (SPIKE)	CVR (BASE)	Δ BOOKINGS	↗ TRAFFIC	↑ CONVERSION	VERDICT
Facebook	1919	1537	19.3%	18.8%	+82	+72	+10	traffic-driven
Google Search	842	802	17.2%	15.2%	+23	+6	+17	conversion-driven
Organic	1702	1748	5.2%	4.7%	+7	-2	+9	conversion-driven
WhatsApp	1732	1781	0.8%	0.5%	+4	-0	+4	conversion-driven
Organic-WA	1702	1748	4.5%	4.2%	+2	-2	+4	conversion-driven
JustDial	0	3	—	33.3%	+2	—	—	conversion-driven
Practo	261	246	5.4%	6.6%	-2	+1	-3	conversion-driven

Biggest mover: **Facebook** +82 bookings, of which +72 from traffic vs +10 from conversion. **Repeatable mechanism**: increase ad budget / impressions on Facebook. Conversion rate held, so more spend = more bookings at the same efficiency.

Per-clinic contribution to the spike

From Redshift (data.json) — TOTAL bookings per clinic, not online-only. Network total 5,400/wk; CSV "online" subset is ~14%. Use the deltas to spot which clinics moved.

Path to 1000+ — math floor

Each channel's "proven ceiling" = highest weekly value observed. This is the FLOOR — what's achievable just by restoring lost ground (no new campaigns required).

CHANNEL	BASELINE	OBSERVED CEILING	LEVER (CEILING – BASELINE)	% OF TOTAL LEVER
Facebook	289	371	+82	51%
Google Search	122	145	+23	14%
Organic	83	105	+23	14%
Organic-WA	74	91	+17	11%
WhatsApp	9	16	+7	5%
Practo	16	22	+6	4%
JustDial	1	3	+2	1%
If every channel returns to ceiling	608	—	+159	= 767

Even at proven ceilings across every channel, projected total is 767 — still 233 short of 1000. Reaching 1000+ requires lifting ceilings (new campaigns/cities) on top of restoring existing channels.

Path to 1000+ — actionable roadmap

Five levers grounded in your data. Adjust each lever's target to model scenarios. The running total updates live below.

1. FB SUSTAINED SCALE

current **264** → target **500** **+236**

Spike proved 371/wk achievable. Sustained scale-up to 500/wk = +35% above peak.

→ Increase FB weekly budget ~40% above baseline + run 4-6 creative variants in parallel

2. GOOGLE SEARCH PUSH

current **122** → target **150** **+28**

Peak observed 145. Modest target 150 — proven + cheap.

→ Add 5-10 high-intent keyword campaigns + boost bids on top performers

3. RESTORE OTHER CHANNELS

current **104** → target **130** **+26**

Organic + WA + Practo + JustDial. Currently ~100, ceiling 130 — restore to peak.

→ Improve organic SEO content cadence + activate WhatsApp click-to-chat ads

4. NEW CHANNELS

current **15** → target **80** **+65**

IG (13/wk) + YouTube (0) + ChatGPT/Perplexity (~0). New surfaces with adjacent audience.

→ Launch IG Reels campaigns + YouTube pre-roll + answer engine optimization (AEO)

5. CONVERSION + CLINIC EXPANSION

current **0** → target **140** **+140**

On top of channel growth: lift FB CVR 19→23% adds ~70; new clinic / virtual capacity adds ~70.

→ Faster lead-response SLA + new Tier-2 clinic activation + reduce 240/wk no-shows by 25%

Scenario composition

✓ Projected total: 1000 — clears the 1000 target by 0.

Mix: FB 500 (50%), GS 150, Other 130, New 80, Uplift 140.

➤ REPEATABLE MECHANICS

- **FB sustained scale:** replicate the 4-10 May budget burst, but kept on continuously. Lift was +25% leads at constant 19% CVR → linear in spend. **Prereq: fix the FB-spend Redshift feed (broken since Feb 9) so you can measure efficiency before scaling.**
- **FB creative diversification:** the spike came from a single push. Run 4-6 creative variants in parallel to find ones that beat 19% CVR.
- **Google Search push:** peak 145, current 122. Small lever (+20-30/wk) but proven & cheap.
- **No-show reduction:** 240 no-shows/wk = 33% leakage. Even 25% recovery = +60 bookings → done.

⚠ CEILING-BREAKERS (NEED INVESTMENT)

- **Instagram + YouTube:** current ~13 + 0 bookings/wk. Adjacent FB audience, untested.
- **City expansion:** top-delta during spike was Practo Online (+213 total bookings). Replicate the virtual-clinic capacity model.
- **Conversion improvement on FB:** 19% lead→booking. Better landing page / faster response time could lift to 22-25% — that's +60-100 bookings/wk on FB alone at current spend.
- **New top-of-funnel:** WhatsApp click-to-chat, content marketing, doctor-referral programs. Anything that isn't FB/GS dependency.

Lever defaults are calibrated from your 13-week data. Adjust the inputs to test sensitivity — e.g. "what if FB only gets to 350?" or "what if conversion stays flat?". The roadmap chart updates instantly.

⚠ Data caveats

- Source: Clinic Wise WoW - GMB_Clinic Wise WTD Tracker.csv — founder's weekly tracker, online bookings only
- Per-clinic breakdown rows in the CSV are #REF! errors — clinic-level decomposition unavailable from this file
- Two channel rows (organic, organic-wa, whatsapp) overlap — likely whatsapp + organic-wa are subsets of organic; not double-counted in the waterfall but the math may shift if your definitions differ
